Biases and ethics

- Historically, minorities had lower chances of getting loans, mortgages, etc.
- This is reflected in the historical data
- This data is used to train ML models
- Now the historical racial bias is codified, since the models will make predictions based on patterns it saw in the training data
- Similar issue with clinical trials
 - Most studies were done on middle aged white men
 - Do these data apply to women, children, other ethnicities?
- Huge issue recognized in data ethics

Biases and ethics

aka, we like shiny new things

- Historical bioinformatic data incompatible with currently produced data
- We have lost the opportunity to use this large corpus of data
 - Billions of dollars in international funding
- We can't tell how these data relate to current findings easily
