

AI in Biotech

- ✦ Drug discovery
 - ✦ Culling through millions of candidates to identify the next molecule for drug development
- ✦ Patient management and decision support
 - ✦ Fast analytics to provide likely causes, drug effects and interactions, risks and side-effects based on patient history, EMR mining and literature mining

AI in Biotech

- ✧ Image analysis
 - ✧ Culling through radiographic data (X-rays, MRI, CT scans)
 - ✧ Better evaluation of drug benefit
- ✧ Natural language processing
 - ✧ Knowledge discovery and curation
 - ✧ Records-mining
- ✧ Bioinformatics
 - ✧ Processing, predicting, scaling up
