

Big Data + ML/AI $\neq$ Sorcerer's Stone

- ✧ Big Data can mean Big Noise
 - ✧ No signal to be had
 - ✧ ML will give spurious, irreproducible answers
 - ✧ Dietary studies are notorious for this, as are psych studies

Big Data + ML/AI $\neq$ Sorcerer's Stone

- ✦ Finding and assessing rare events is VERY HARD
- ✦ Suppose an event occurs in 1 out of 10,000 people
- ✦ You fit a ML model to this huge database (think Medicare)
- ✦ I use the amazing “Ostrich Method”: Just say no
 - ✦ I’ll have an accuracy of 99.99% in this scenario
 - ✦ Beat that, you fake intelligence.
