

What is ML?

- ✧ Algorithms that ingest data and adapt to mimic and express inherent data patterns
 - ✧ Learns from data
 - ✧ Can provide predictions
- ✧ Algorithms can be
 - ✧ Simple (linear regression)
 - ✧ Complex (decision trees)
 - ✧ Indecipherable or magical (neural networks / deep learning)

What is ML?

- ✦ Algorithms that are mainly meant for prediction
 - ✦ Supervised learning
- ✦ They cannot often express why the predictions happen
 - ✦ What factors influenced the prediction in what way?
 - ✦ It's a function of the complexity of the model and our inability to express or comprehend that complexity easily
- ✦ Increasing research, emphasis on “explainable AI” or XAI
 - ✦ LIME, SHAP, others
 - ✦ Intrinsically explainable models (Microsoft)
